Posimed Super Smellies

Super Smellie Scented Pens

Super Smellies

SPRMSLS20182

£60.00

Super Smellies are innovative, pen-like devices designed to dispense pleasant scents directly into dental nasal hoods, providing a calming and enjoyable experience for both children and adults during dental procedures.

Each pack contains four distinct scents —“Betty Berry,” “King Kola,” “Molly Melon,” and “Bobby Banana”— allowing patients to choose their favourite aroma. Each pen can be used up to 50 times, with one application per hood, offering a simple yet effective way to help distract patients from the procedure and reduce anxiety.

By creating a more engaging and sensory friendly environment, Super Smellies make dental visits more comfortable and less intimidating.

Waste Gas Scavenging

Miniscav™ Scavenger Unit

Miniscav Active Scavenger Unit

RA2070

£1,550.00

Miniscav active scavenger unit
The Miniscav active scavenger unit provides reliable and efficient waste gas management in medical and industrial environments.

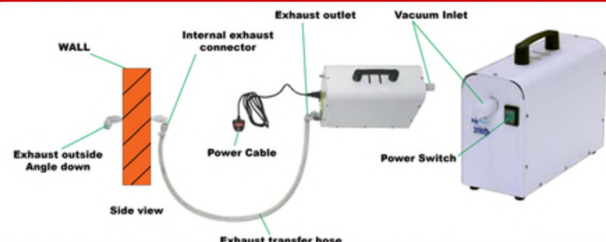

The compact unit includes a 1-metre, 15mm flexible transfer hose with quick-fit connections, a rigid external waste vent assembly and a 2-metre power lead for straightforward installation.

CE marked and compliant with IEC 60601-1:2005, the Miniscav requires a standard 240V power socket and a 16mm external wall vent.

Customisable: Longer flexible transfer hoses are available at an additional £10.00 per metre, allowing the unit to be adapted to your installation requirements.

Width 160mm x Length 320mm x Height 250mm / Weight 9.25 Kg.

User Guidance for Miniscav™

- 1) For installation please refer to manual; available on ramedical.com
- 2) It is essential to use an Active breathing system with the Miniscav - i.e. one capable of an air flow rate at the nasal mask of 40-45 L/min

Please note: The Miniscav will not work with a Passive type dental breathing system i.e. corrugated hose and single nasal mask type. Never hang the exhaust hose out of a window. Note: 2020 onwards, Only new 'push fit' type of venting model available i.e. RA2070 Older models i.e. RA2046 will still be supported for a period of no more than 10 years and spare parts are available. For further information, please contact Customer Services on 01535 652444 or email info@ramedical.com

Medical Gases information

Medical Gas Cylinder Advice

Oxygen Cylinders: The colour coding of the shoulders of compressed medical oxygen cylinders is white (RAL 9101). The colour coding of the cylinder body is now also white (RAL 9101). In addition, cylinders will carry the oxygen name on the body. For a limited period, some cylinders in circulation may still have black bodies, as shown in the box opposite. The programme to convert all compressed medical oxygen cylinders to white bodies will be completed by 2025.

Nitrous Oxide Cylinders: No change to colour coding anticipated.

Cylinder Bar Pressure: Please be aware that only oxygen medical gas cylinders filled to a maximum of 137 Bar should be used with Inhalation Sedation Equipment.

Important Notice: There are some cylinders in circulation which have been pressurised to 200 Bar - these are not suitable and should not be used. **Any use of these 200 Bar cylinders will invalidate service or equipment warranty in place.**

For further information please contact Customer Services.

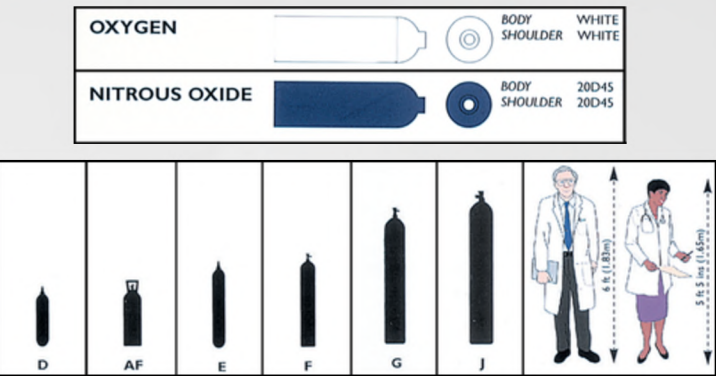

Medical Gas Cylinder Care & Storage

1. Cylinders should be stored in a secure, weatherproof and well-ventilated area.
2. Cylinders should be secured by means of brackets or chains. E or D size cylinders may be stored horizontally.
3. The store should have an adequate means of access, to facilitate delivery and collection of cylinders.
4. The storage area should be clearly identified i.e. by use of compressed gases warning signage. The emergency services should be informed of cylinder store location.
5. So far as is practical, lighting and electrical equipment should be sited in a safe position, remote from the cylinder storage.
6. Lubricants should be avoided. Only lubricants that are especially made for oxygen service and specified by the equipment supplier should be used.
7. When handling Oxygen cylinders, always ensure that hands are clean and free from oil or grease. Alternatively, use clean gloves.
8. Medical gas pressure reducing regulators should be handled with care and replaced every 6 years - sooner if worn or damaged.
9. Separate or identify full, empty and faulty cylinders.
